1. What is Test Routify?

Test Routify is a **UK driving-test learning platform** that helps learner drivers pass their practical driving test faster by letting them:

- **Watch** the exact roads of their local test centre, filmed from real cars with front and rear cameras
- **Practice** those routes as turn-by-turn voice navigation — just like a sat-nav, but for their test route
- **Learn** the tricky junctions, roundabouts and manoeuvres before they even sit in a test car

Think of it as **Netflix for driving test routes** — but instead of films, you're watching real drives through the exact roads you'll be tested on.

2. The Problem We Solve

For Learner Drivers

Every year, **roughly 1.7 million people take the UK practical driving test**. The pass rate hovers around **46%** — meaning more than half fail, often paying £62+ to rebook.

Why do people fail?

- They don't know the test routes
- They've never driven certain junctions or roundabouts before
- Nerves kick in because everything feels unfamiliar

Test Routify fixes this by making the test route familiar *before* test day. When learners have already virtually "driven" the route dozens of times, test day becomes familiar territory, not a frightening unknown.

For Driving Instructors (ADIs)

Approved Driving Instructors spend hours showing pupils the same test routes repeatedly. Test Routify lets instructors:

- Upload their own route recordings once
- Have pupils watch and practice independently between lessons
- Earn recognition, credits, and credibility through a verified instructor badge

3. Who Is It For?

USER TYPE	HOW THEY USE TEST ROUTIFY	WHAT THEY GET
Learner Driver	Watches routes before lessons & test	Familiarity with roads, higher pass chance
Driving Instructor (ADI)	Uploads routes, earns reputation & credits	Passive income, differentiated service, more pupils
Driving School	Multiple instructors upload from one area	Content library for all pupils
Test Centre Candidates	Finds routes for their specific test centre	Targeted, relevant practice

4. How It Works — The Simple Story

```
graph TD; A[Instructor films the route] --> B[Uploads front cam + rear cam + GPS track to Test Routify]; B --> C[Test Routify's AI processes it automatically  
(syncs video to GPS, checks quality, removes faces & plates)]; C --> D[Route is published on the platform]; D --> E[Learner finds the route for their test centre]; E --> F[Watches the real drive. Practises with voice guidance.]; F --> G[Goes into the test knowing exactly where to turn.];
```

Instructor films the route

↓

Uploads front cam + rear cam + GPS track to Test Routify

↓

Test Routify's AI processes it automatically
(syncs video to GPS, checks quality, removes faces & plates)

↓

Route is published on the platform

↓

Learner finds the route for their test centre

↓

Watches the real drive. Practises with voice guidance.

↓

Goes into the test knowing exactly where to turn.

The magic is **automatic GPS synchronisation** — the app knows exactly where the car is at every moment in the video, so it can show you the map view alongside the dashcam footage, and can fire turn instructions at precisely the right moment during voice practice.

5. Key Features Explained

5.1 — Route Discovery

What it does: A browseable catalogue of driving test routes, searchable by test centre name, town, postcode, or difficulty level.

Why it matters for clients: Users can instantly find routes relevant to their local test centre (e.g. "Mill Hill", "Hendon", "NW7"). Routes are tagged by difficulty — beginner, intermediate, advanced, and test standard — so learners can progress at their own pace.

5.2 — Multi-View Video Player

What it does: Plays the recorded route video with four viewing modes:

- **Front camera** — driver's-eye view of the road ahead
- **Rear camera** — view out the back window
- **Split view** — both cameras side by side simultaneously
- **Live map** — the GPS track drawn on a real map, showing the car's position in real time

Why it matters for clients: Learners don't just watch a video — they experience the route from multiple angles simultaneously. The split view is particularly powerful: "watch the rear camera when you reverse — you'll know exactly what to look for."

5.3 — Practice Mode with UK Voice Guidance

What it does: A sat-nav-style practice session where the app reads out turn-by-turn instructions in British English as you mentally drive the route — *with no video, just like the real test.*

Example voice prompts:

"In 200 metres, turn left"

"At the roundabout, take the third exit"

"Bear right at the junction"

Why it matters for clients: This is the killer feature. Learners can close their eyes and "mentally drive" the route at home, at 2am, as many times as they like. The muscle memory and route knowledge builds without spending a penny on extra lessons.

5.4 — GPS-Synchronised Timeline

What it does: A scrubber bar at the bottom of the video shows exactly where along the route the car is. Junctions and roundabouts are marked as visual waypoints on the timeline — click one and jump straight to that moment in the video.

Why it matters for clients: No more scrubbing through 20 minutes of footage looking for "that tricky roundabout". Every junction is bookmarked.

5.5 — Route Upload & Contributor System

What it does: Any user (especially instructors) can upload their own route recordings. They provide:

- Front dashcam footage (one or more video clips)
- Rear dashcam footage (optional but recommended)
- A GPX file (GPS track from a phone or dashcam)

What happens automatically after upload:

1. Videos are stitched together if filmed in multiple clips
2. GPS track is validated for accuracy and signal quality
3. Video is synced to the GPS data frame by frame
4. Duplicate routes are detected and flagged
5. AI privacy protection removes faces and number plates
6. A quality score (0–100) is calculated
7. An admin reviews and approves the route
8. Route goes live for all users to watch and practise

Why it matters for clients: The platform grows itself. Instructors are incentivised to contribute because they earn credits, reputation points, and badges. More instructors = more routes = more learners = more revenue.

5.6 — Verified Instructor Programme

What it does: Driving instructors can submit their ADI (Approved Driving Instructor) number and evidence of qualification. Once verified by the Test Routify admin team, they receive:

-  A "Verified Instructor" badge on their profile
-  A **search ranking boost** (their routes appear higher in results)
-  **Fast-tracked** route approvals
-  **Instructor reputation bonus** in the community leaderboard

Why it matters for clients: Learners trust routes from verified instructors more than anonymous uploads. Instructors have a strong incentive to join the platform officially. This creates a quality-controlled, trusted content library.

5.7 — Badges & Reputation System

What it does: Contributors earn badges and build reputation through activity:

BADGE	HOW TO EARN IT
 First Route	Publish your first route
 10 Routes	Publish 10 routes
 50 Routes	Publish 50 routes
 High Quality	Consistently score above the quality threshold
 Verified Instructor	Verified ADI status confirmed by admin

Reputation scores are displayed on contributor profiles and leaderboards.

Why it matters for clients: Gamification drives engagement. Instructors and contributors stay active because they're building a visible reputation on the platform. Leaderboards create healthy competition.

5.8 — Route Quality Scoring (AI-Powered)

What it does: Every uploaded route is automatically scored 0–100 based on:

- **GPS quality** — signal continuity, accuracy, no teleports or drift
- **Video quality** — no black frames, corruption, or freezing
- **Sync confidence** — how well the video and GPS align
- **Overall composite score**

Routes with scores below the threshold are flagged for admin review rather than auto-published.

Why it matters for clients: Quality is automatic and objective. Users can trust that published routes are genuinely good quality. The platform maintains its reputation without manual review of every frame.

5.9 — Subscription & Premium Features

What it does: Test Routify operates on a freemium model:

FEATURE	DEMO (FREE)	PREMIUM
Browse route catalogue	✓	✓
View/practise 1 route total (account-wide)	✓	✓
Unlimited route access (per purchased test centre)	✗	✓
Practice mode (voice guidance)	✗	✓
Multi-view playback	✗	✓
Offline downloads	✗	✓
Verified instructor routes	✗	✓

Access rules: Registration is required for all access, including the demo — there is no anonymous entry. Learners browse freely; the **first route a user opens** becomes their one free demo route (account-wide, any centre). **Premium is purchased per test centre and is not switchable** — each subscription unlocks every route at one specific centre.

Why it matters for clients: The demo tier lets registered users discover the product and experience it — a powerful conversion funnel. Premium unlocks the full value for their chosen test centre. Learners are already spending £30–60/hour on lessons; £4.99/month is an easy upsell.

5.10 — Privacy Protection (AI Blur)

What it does: The AI pipeline automatically detects and blurs:

- **Faces** of pedestrians, passengers, and other drivers
- **Vehicle number plates**

This happens automatically during the processing pipeline — no manual editing required.

Why it matters for clients: GDPR and privacy compliance is non-negotiable. Instructors don't need to manually edit their footage. The platform handles it.

6. The Two Products

Test Routify is actually **two products in one**:

Product A — The Consumer App

Who uses it: Learner drivers (and curious instructors)

Available as:

-  **Web app** (works on any browser — laptop, phone, tablet)
-  **Mobile app** (iOS and Android — native, smooth, offline support)

What they can do:

- Sign up with email, Google, or Apple account
- Browse and search routes by test centre
- Watch dashcam footage in multiple views
- Practise routes with British English voice guidance
- Manage their subscription and account

Product B — The Admin Console

Who uses it: The Test Routify operations team, moderators

Available as:

-  **Web dashboard** (desktop browser only, secure login required)

What they can do:

- Review and approve/reject uploaded routes
- Manage users (role changes, suspend accounts)
- Verify instructor applications
- Monitor platform revenue and subscriptions
- Manage the Community Fund
- Review flagged content reports

7. Pricing

Consumer Subscription Tiers

PLAN	PRICE	BEST FOR
Demo (Free)	£0/month	Browsing; one route total (account-wide)
Premium Monthly	£4.99/month · per test centre	Learners with a test coming up soon
Premium Yearly	£39.99/year · per test centre	Long-term learners (save ~33%)

Premium is purchased per test centre and is not switchable. Each subscription unlocks unlimited routes for one specific centre; a learner preparing at multiple centres holds one subscription per centre. Registration is required for all access (including the demo); learners then browse freely, with the first route they open becoming their one free demo route.

Context: The average learner takes 45 hours of professional lessons at £30–35/hour = ~£1,500 in lesson costs. Test Routify Premium at £4.99/month is less than **0.3% of that spend** — yet could meaningfully increase pass rates.

Revenue Streams

- 1. **Subscriptions** — recurring monthly/yearly revenue (primary)
- 2. **Instructor credits** — future marketplace mechanic for premium content
- 3. **Community Fund** — 10% of net profit allocated to instructor rewards (see below)

8. The Admin Console (For Operators)

The Admin Console is Test Routify's operations headquarters. Here's a tour of each section:

Review Queue

All uploaded routes land here before going live. Admins see:

- Route title and who uploaded it
- Quality score (0–100) — colour-coded green/amber/red
- Sync confidence percentage
- Whether it's from a verified instructor (fast-tracked)
- Date submitted

Clicking **Review** opens a detailed panel showing:

- Route thumbnail
- Full quality metrics (GPS score, sync confidence)
- Every processing stage and its status
- All video renditions available
- **Approve & Publish** or **Reject** buttons

Users

Full user management panel:

- Search any user by name or email
- Change their role (user / contributor / instructor / moderator / admin)
- Suspend or reinstate accounts

Instructors

Pending instructor verification applications:

- Applicant name and email
- Their ADI number
- Evidence document link
- One-click **Verify** or **Reject**

Revenue

Real-time revenue dashboard:

- Estimated Monthly Recurring Revenue (MRR)
- Active monthly subscriber count (£4.99 plan)
- Active yearly subscriber count (£39.99 plan)
- Full breakdown by plan and status

Community Fund

Test Routify's transparency feature — 10% of net profit goes to the Instructor Community Fund:

- Total contributed to date
- Total paid out
- Current balance
- Manage beneficiaries (instructors/schools receiving payouts)
- Record payouts manually
- Full transaction ledger (publicly visible at `/api/fund/summary`)

Reports

Flagged content submitted by users — reviewed and actioned here.

9. How to Run a Demo

Option A — Quick Demo (registration required)

1. Open a browser and go to the web app URL
2. Register an account — **there is no anonymous access**; the demo needs a registered account
3. You land on **Test Centres** — open a centre, then open a route (the first route you open is your free demo route)
4. Show the client: Test Centres → Discover → Route Detail → Watch page → Practice mode

This is the **fastest demo path**. The video player and voice guidance work fully on the one demo route (demo is limited to one route total across the account).

Option B — Full Account Demo (Shows the Complete Journey)

1. Go to the web app and click "New here? Create an account"
2. Enter a name, email, and password — takes 10 seconds
3. You're now logged in and land on the Test Centres page (open a centre, or go to Discover Routes)
4. Browse routes, open one, click "Watch route"
5. Show the multi-view player (front/rear/split/map)
6. Go back, click "Practice route" → shows the paywall (upgrade prompt)
7. Navigate to **Account** to show the upgrade options
8. Navigate to **Contribute** to show the contributor tools

Demo Flow Script

STEP	WHAT TO SAY	WHAT TO CLICK
1	"This is what a learner sees when they open Test Routify"	Open web app, register, then choose demo mode
2	"They can instantly browse all routes for their test centre"	Show Discover page
3	"Let me show you a route — this is the actual road, filmed from a real car"	Open a route, click Watch
4	"They can switch between front camera, rear camera, or see both at once"	Toggle view modes
5	"This map view shows exactly where the car is in real time"	Switch to Map view
6	"Now watch this — Practice mode. No video, just voice guidance, like the real test"	Go to Practice mode
7	"The app reads out every instruction in British English as you mentally drive the route"	Press Start
8	"This is what Premium unlocks for their chosen test centre — unlimited routes, practice mode, offline access"	Show paywall / pricing

10. How to Onboard a New User (Step-by-Step)

For a Learner Driver

Step 1 — Create an Account

- Visit the Test Routify web app or download the mobile app
- Click "Create an account"
- Enter: Display name, Email address, Password
- Click "Create account" — you're in immediately, no email verification needed to get started

Step 2 — Browse Routes

- You land on the **Test Centres** page — open a centre, or go to **Discover Routes** for the full grid
- Each card shows the route title, test centre location, difficulty, a thumbnail, and the instructor byline

Step 3 — Find Your Test Centre

- Use the **global search** on the Discover Routes list (no separate search page)
- Type a route title, instructor name, test centre, town, or postcode (e.g. "Hendon" or "NW4")
- Results filter as you type

Step 4 — Watch a Route

- Click any route card to open the Route Detail page
- Click "► **Watch route**"
- The video player opens — use the view buttons at the top to switch between Front / Rear / Split / Map
- Use the scrubber bar at the bottom to jump to specific points
- Junction and roundabout markers are shown above the scrubber — click them to jump

Step 5 — Practice the Route

- Go back to Route Detail, click "🏁 **Practice route**"
- If you're on a free account, you'll see the upgrade prompt
- After upgrading to Premium, press **Start** and listen to the voice instructions
- Press **Stop** at any time, then **Restart** to go again

Step 6 — Upgrade to Premium (Optional)

- Go to **Account** in the navigation
- Click "**Upgrade**"
- Choose Monthly (£4.99) or Yearly (£39.99) — the subscription is for **one specific test centre** and is not switchable
- You're taken to Stripe's secure checkout — enter card details
- Return to the app — Premium is active immediately for that test centre

For a Driving Instructor Wanting to Upload Routes

Step 1 — Create a regular account (same as above)

Step 2 — Go to Contribute

- Click your Account page
- Click "Open contributor tools"
- Or navigate directly to the Contribute section

Step 3 — Read and accept the footage licensing agreement

- Test Routify requires instructors to confirm they have rights to publish the footage
- This is a one-time click

Step 4 — Upload your first route

- Click " Upload a new route"
- Fill in: Route title, Description (optional)
- Select your **front camera video file(s)** — multiple clips are OK, they'll be stitched
- Select your **rear camera video file(s)** — optional but recommended
- Select your **GPX file** — the GPS track from your dashcam or phone
- Tick the licensing agreement checkbox
- Click **Upload**

Step 5 — Watch the processing

- You're taken to a status page showing each pipeline stage in real time:
- - Ingest → Sort clips → Gap detection → Merge → GPS validation → Quality score → Sync → Privacy blur → Duplicate check → Ready for review
- This typically takes a few minutes

Step 6 — Await admin approval

- Once processing completes, the route enters the **Review Queue** in the admin console
- A Test Routify moderator reviews and approves it
- You'll see the route go live in the catalogue

Step 7 — Become a Verified Instructor

- In the Contribute section, click " **Become a verified instructor**"
- Enter your ADI number and upload your evidence document
- Submit — a Test Routify admin reviews and approves it
- Your profile gets the  Verified Instructor badge

11. What Makes Test Routify Different

vs. YouTube / Generic Video

YOUTUBE	TEST ROUTIFY	
Test route specific	✗ Hit and miss	✓ Always test route specific
GPS synchronised	✗ No	✓ Frame-perfect GPS sync
Voice practice mode	✗ No	✓ British English sat-nav style
Privacy (faces/plates blurred)	✗ Manual	✓ Automatic AI
Quality verified	✗ No	✓ AI quality score + human review
Instructor verified	✗ No	✓ ADI verified badge system
Mobile app	Partial	✓ Native iOS & Android

vs. Traditional Theory/Hazard Perception Apps

Test Routify is **not** a theory test app. It is specifically focused on the **practical driving test routes** — the actual roads, junctions, and manoeuvres you will be tested on. No other major platform does this with GPS-synced video and voice practice.

The Unfair Advantage

The **supply-side flywheel**: Every new instructor who joins the platform as a contributor creates content that attracts new learners. More learners → more revenue → more incentive for instructors → more routes → more learners. The platform grows itself.

12. Frequently Asked Questions

Q: Does it work offline?

Yes — Premium subscribers can download routes for offline use in the mobile app. Great for areas with poor signal or for practising in the car without using data.

Q: Is the footage GDPR compliant?

Yes — all uploaded footage is automatically processed by our AI to blur faces and vehicle number plates before publishing. Uploaders confirm they have rights to the footage.

Q: What cameras do instructors need?

Any dashcam that records video and a GPX track (or a phone with a GPS tracking app running). Front camera is required, rear is recommended. Multiple clips from a single journey are automatically stitched together.

Q: How long does route processing take?

Typically 2–5 minutes for a standard 20-minute route, depending on server load. The status page updates in real time.

Q: Can a driving school manage multiple instructors?

Yes — instructors can each have their own contributor profile. School-level accounts and team management are on the product roadmap.

Q: What happens if a route is rejected?

The admin provides a reason. The instructor can re-upload with improved footage. Common rejection reasons: GPS signal too poor, video quality too low, content policy issue.

Q: Is there a web version as well as the app?

Yes — the full product is available as a responsive web app that works on any browser (desktop, tablet, or mobile). The native iOS/Android app adds offline support and smoother video performance.

Q: How does the £4.99/month compare to lessons?

The average UK driving lesson costs £30–35/hour. A learner who avoids even half a lesson by being better prepared on test day saves 6× the monthly subscription cost in one go.

Q: Can learners use it on their phone during a lesson?

Not during the driving lesson for safety reasons, but between lessons — at home, on public transport, the night before the test — absolutely.

Q: What is the Community Fund?

10% of Test Routify's net profit is allocated to the Instructor Community Fund. This pot is distributed to verified instructor contributors as a reward for building the platform's content library. All transactions are publicly visible — full transparency.

Quick Reference Card

ITEM	DETAIL
PRODUCT NAME	Test Routify
WHAT IT IS	UK driving test route learning platform
CONSUMER PLATFORMS	Web (any browser) + iOS + Android
ADMIN PLATFORM	Web dashboard
DEMO (FREE) PLAN	Browse + one route total (account-wide)
PREMIUM MONTHLY	£4.99/month · per test centre
PREMIUM YEARLY	£39.99/year · per test centre (save ~33%)
DEMO MODE	Register, then choose demo mode — registration required
TARGET USER	UK learner drivers + driving instructors (ADIs)
KEY DIFFERENTIATOR	GPS-synced video + voice practice for actual test routes
CONTENT MODEL	Crowd-sourced from instructors, quality-controlled by AI + admin
PRIVACY	Automatic AI face and plate blurring
PAYMENTS	Stripe (web) + Apple/Google IAP (mobile)

Test Routify — Helping every UK learner pass first time.

Document prepared: July 2026
